6000 features

- Top or rear venting options provide installation flexibility
- Zero Clearance provides ease of installation and cost savings
- IntelliFire Ignition System
- Variable valve allows you to adjust the flame height and heat output
- Realistic ceramic fiber campfire style logs
- Balanced flue technology provides a sealed combustion chamber, maintaining indoor air quality
- Multi-function remote provides temperature, flame height and start time control, offering true convenience - never again bend down to start your fireplace
- Energy saving 79% efficiency with the authenticity of a traditional fire
- Variable speed fan with auto on/off

- Standard dress guard with mesh provides clean lines and safety
- 205mm top or rear venting
- AGA #5668

IntelliFire Ignition System

Our state of the art ignition system eliminates a continuously burning pilot light and supplies back-up battery power during a power outage, reducing gas consumption and lowering operating costs. Never again will you manually light a pilot or bend down to start your fireplace.

Convenient Operation

Operate the fireplace, adjust the flame height and view the current room temperature all from the comfort of your chair. Whether you wish to have the fire greet you in the morning for that first cup of coffee or warm the room prior to your arrival

home at night, simply program the start time and temperature - the Deluxe remote will do the rest. To protect the little ones, each remote is equipped with a child safety start and a wall bracket should you wish to locate the remote out of reach.

Balanced Flue Gas Fireplace

A completely sealed system, Heat & Glo balanced flue gas fireplaces draw 100% of combustion air from the outdoors and exhaust all combustion byproducts back outside, with no affect on indoor air quality. In addition, cold air drafts are eliminated and heat output is maximised. No electricity, power venting or fan are required to operate, eliminating the need for a conventional chimney, and allowing for installation in nearly any room of the home. TR technology, another Heat & Glo invention, allows for venting off the top or rear, providing even greater placement flexibility.
